Variáveis

- Idade
- Sexo
- Altura
- Peso
- Pressão arterial sistólica
- Pressão arterial diastólica
- Colesterol
- Glicemia
- Tabagismo
- Consumo de álcool
- Sedentarismo
- **Variável alvo: cardio** apresenta doença cardíaca ou não

```
## gender    cholesterol gluc      smoke    alco     active   cardio
## 1:4780    1:5495      1:6227  0:6700   0:6951   0:1497   0:3693

## (140,180]: 954
```

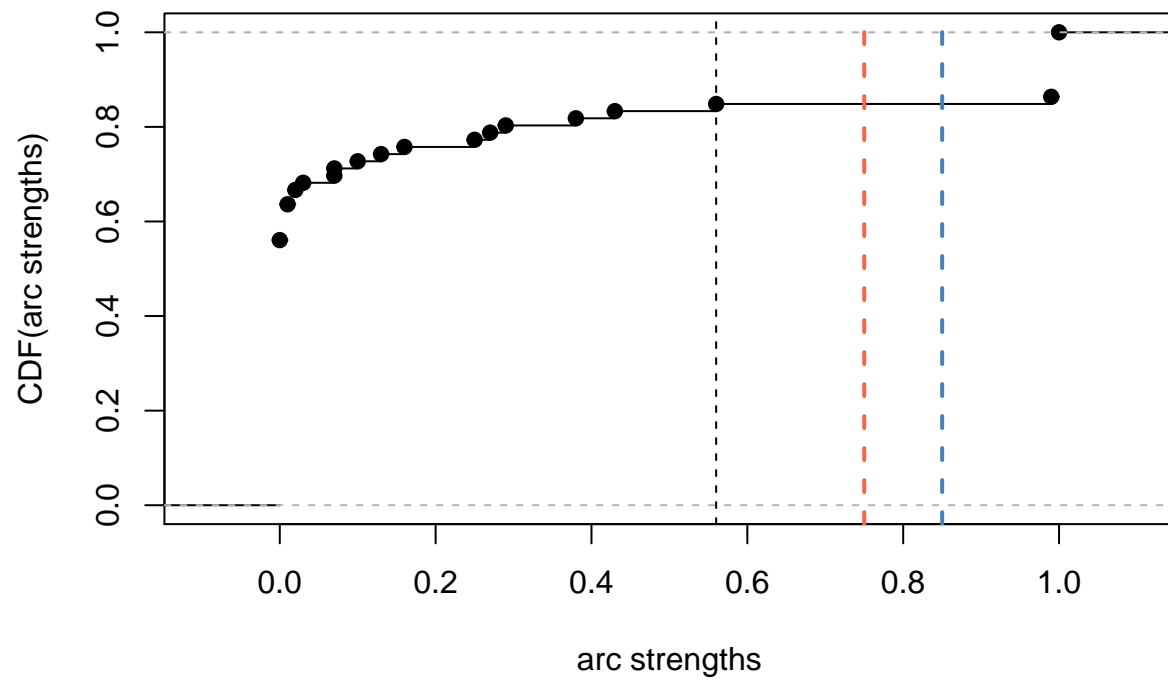

Grafo mostrando como nodos coloridos as variáveis das quais a variável **CARDIO** tem dependência estatística (*Markov blanket*)

Markov Blanket – **CARDIO**

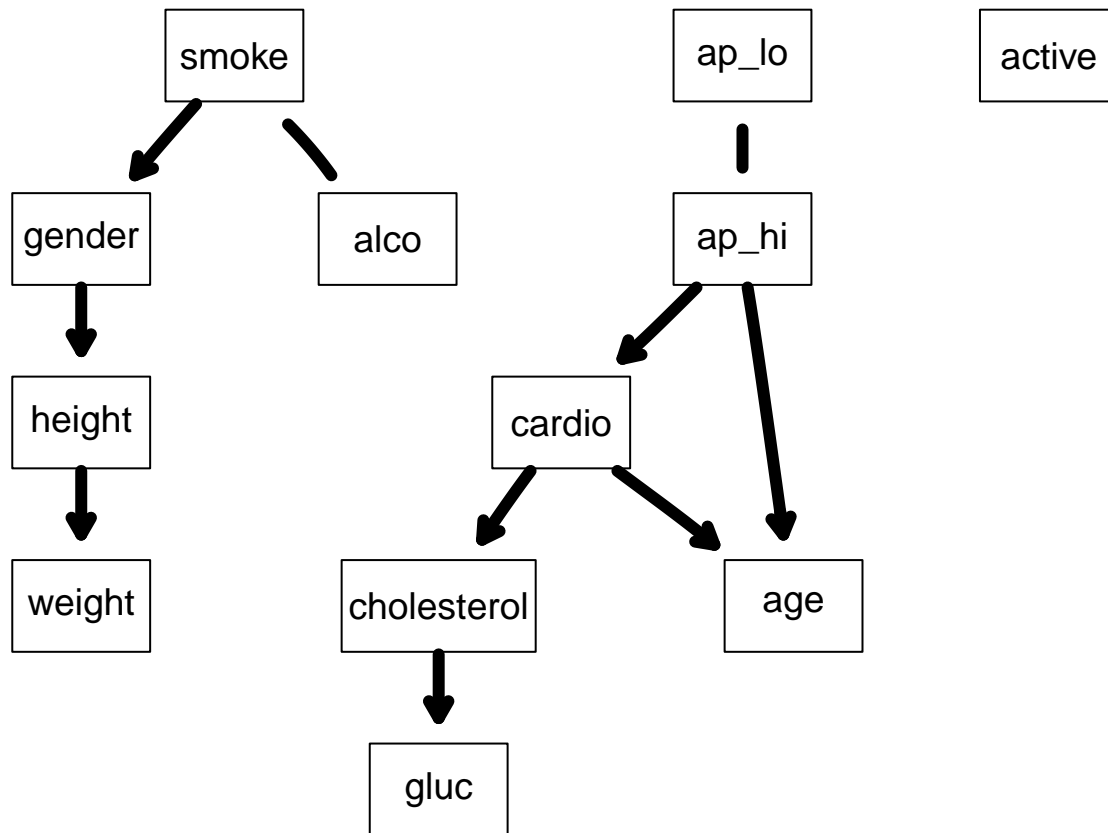

CDF da correlação (correlação de Pearson) entre os nodos do grafo

threshold = 0.56

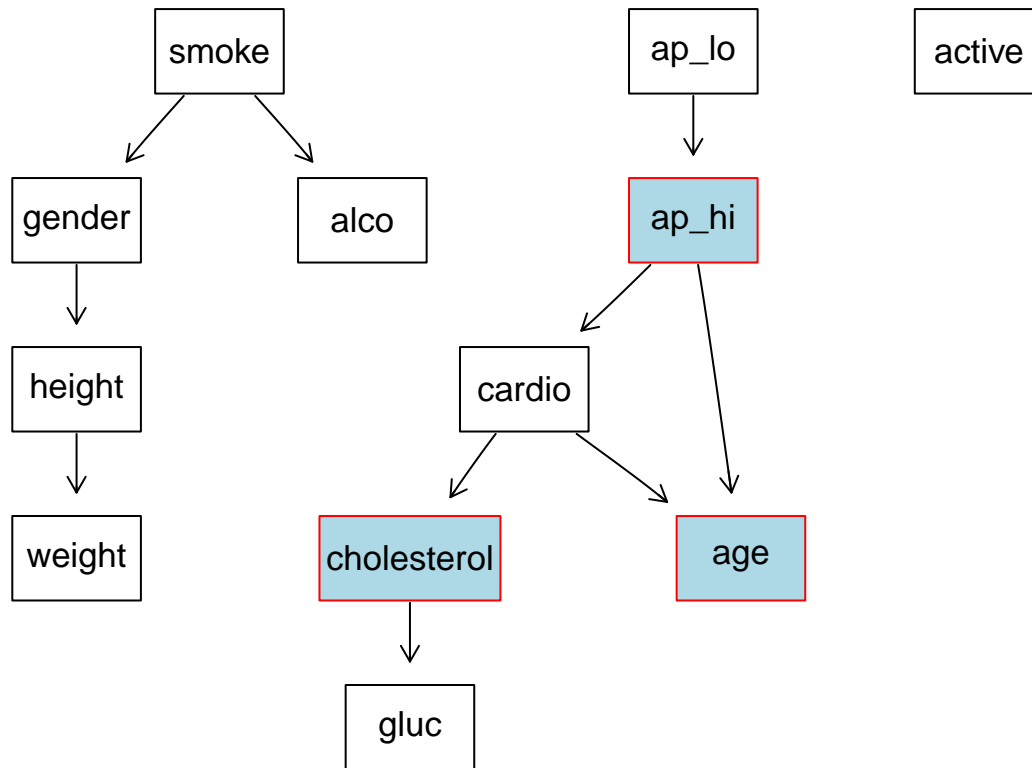

Grafo médio após 100 iterações

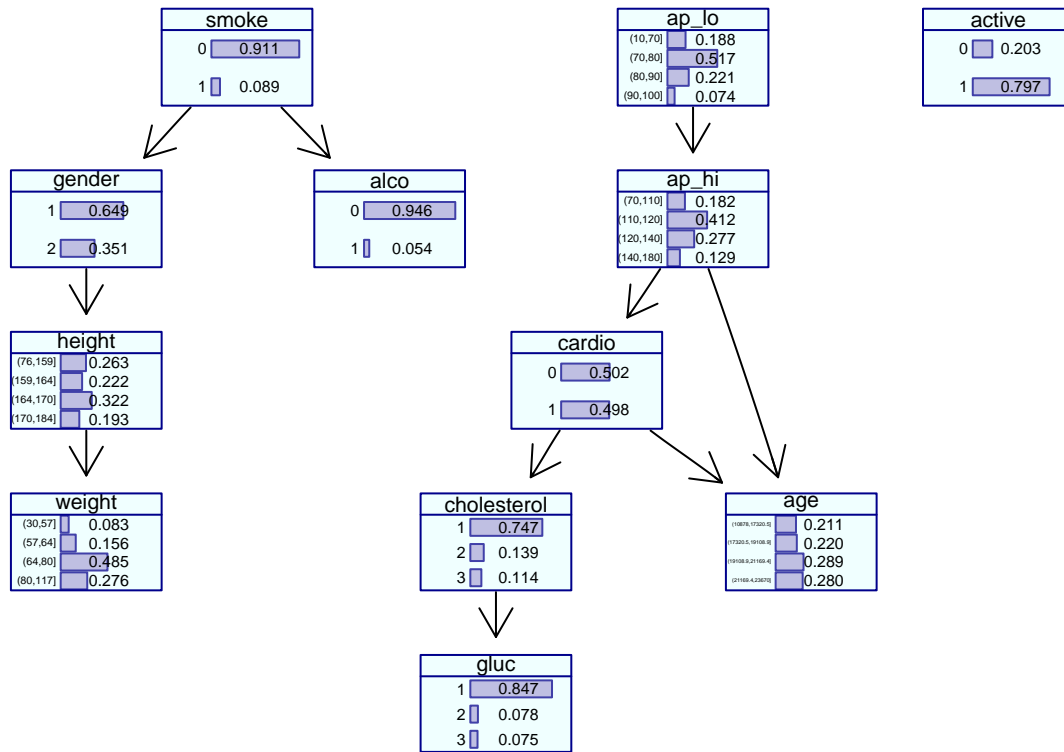

Grafo médio tornado um *DAG*

Markov Blanket – CARDIO

Distribuição de probabilidade (PDF) de cada variável

DAG sem WL

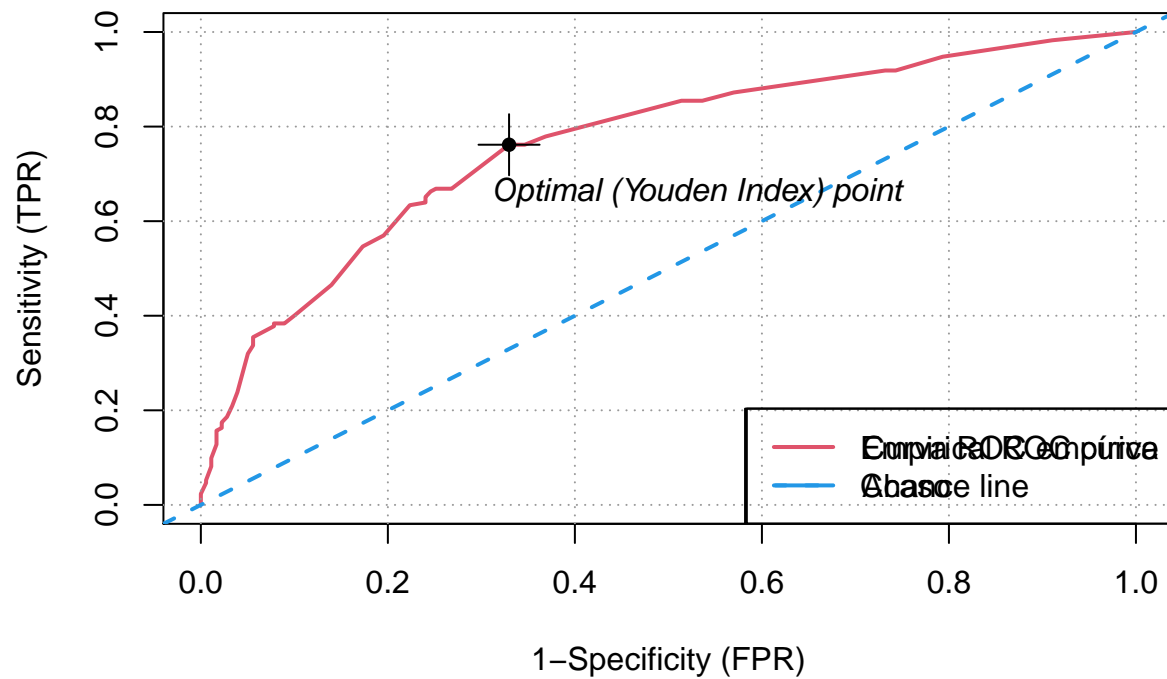

Predição

Desempenho estatístico da rede

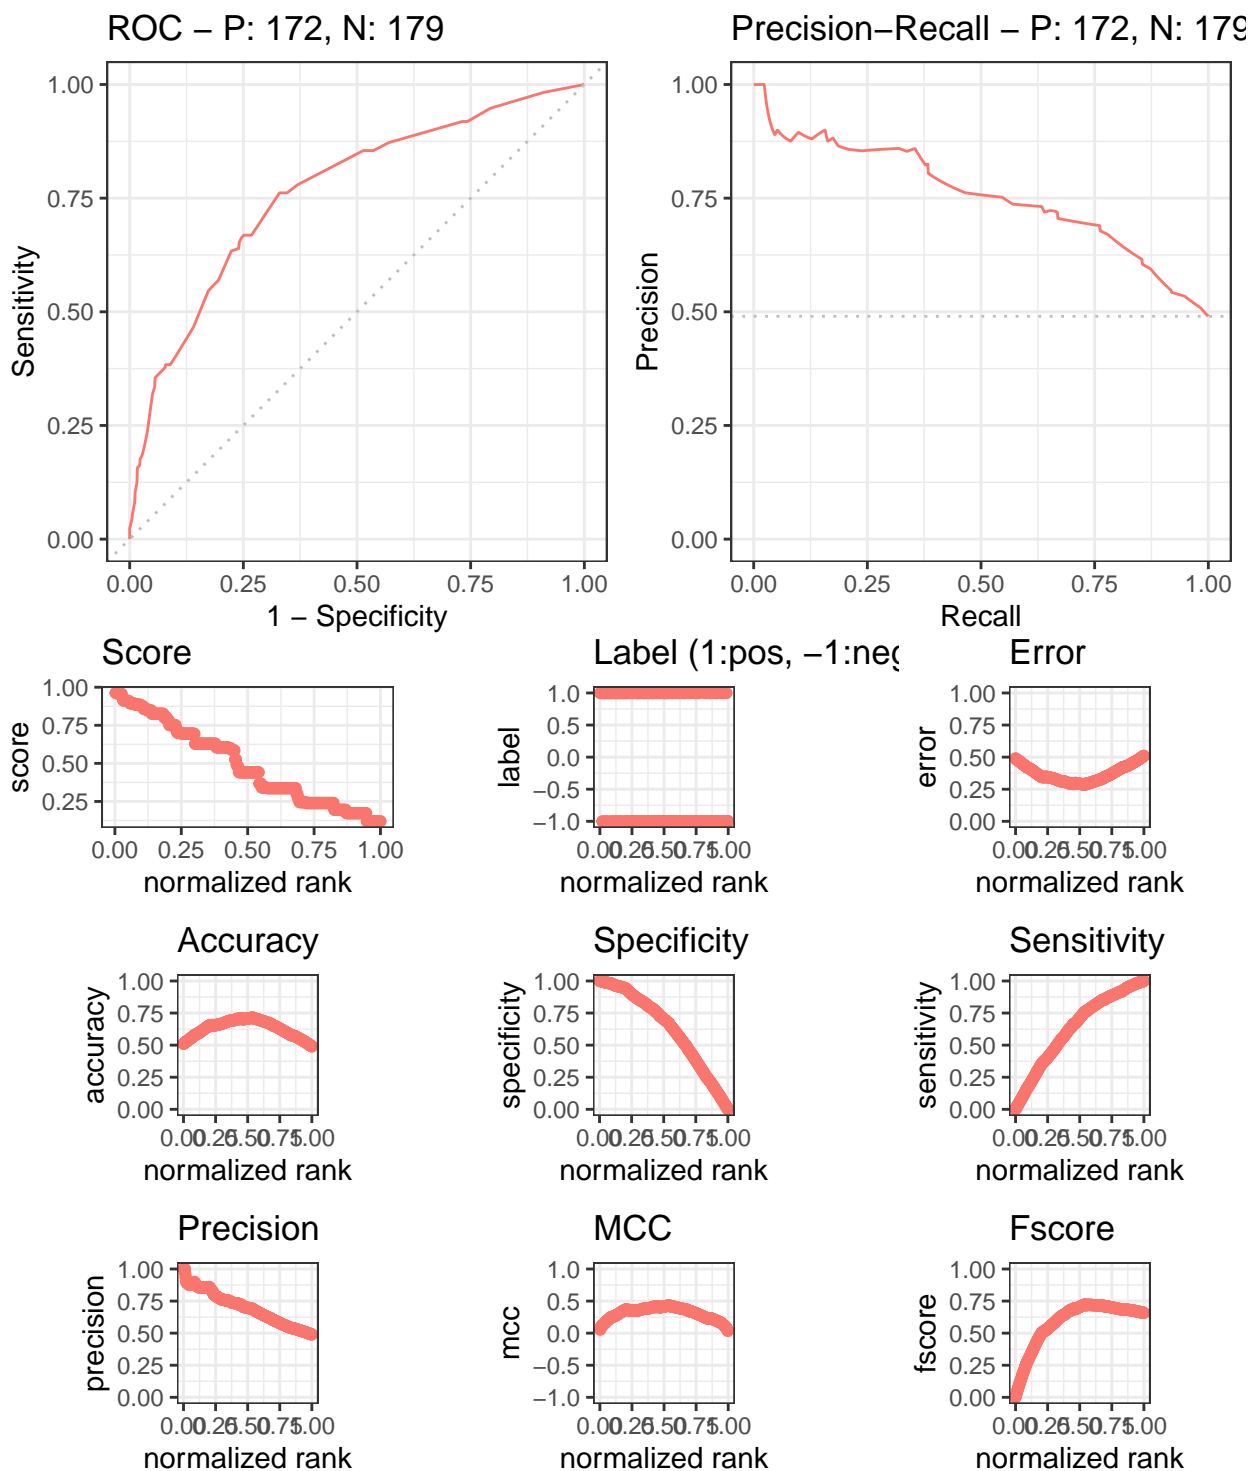

##	Outcome +	Outcome -	Total
## Test +	134	45	179
## Test -	57	115	172
## Total	191	160	351
##	## Point estimates and 95 % CIs:		
##	-----		
## Apparent prevalence	0.51 (0.46, 0.56)		
## True prevalence	0.54 (0.49, 0.60)		
## Sensitivity	0.70 (0.63, 0.77)		
## Specificity	0.72 (0.64, 0.79)		
## Positive predictive value	0.75 (0.68, 0.81)		
## Negative predictive value	0.67 (0.59, 0.74)		
## Positive likelihood ratio	2.49 (1.91, 3.25)		
## Negative likelihood ratio	0.42 (0.33, 0.53)		
##	-----		

Curva ROC

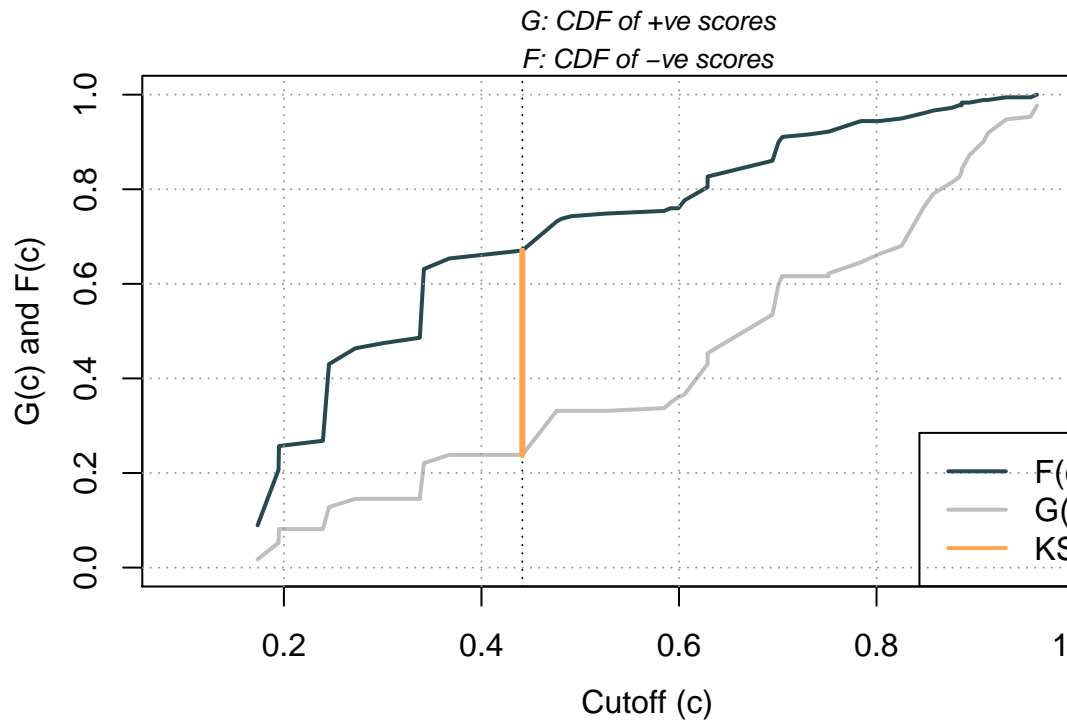

```
##
## Method used: empirical
## Number of positive(s): 172
## Number of negative(s): 179
## Area under curve: 0.7644
##
## 1 Method used: empirical
## 2 Number of positive(s): 172
## 3 Number of negative(s): 179
## 4 Area under curve: 0.7644
```

Outra implementação de curva ROC e outras estatísticas

KS plot

KS plot shows the cumulative density functions $F(c)$ and $G(c)$ in the positive and negative populations. If the positive population have higher value, then negative curve ($F(c)$) ramps up quickly. The KS statistic is the maxi-

maximum difference of $F(c)$ and $G(c)$.

```
## KS Stat (empirical) : 0.432018968429258
```

```
## KS Stat (empirical) cutoff : 0.441399200963467
```

TODO

- ACC: Overall accuracy of classification.
- MIS: Misclassification rate.
- SENS: Sensitivity.
- SPEC: Specificity.
- PREC: Precision.
- REC: Recall. Same as sensitivity.
- PPV: Positive predictive value.
- NPV: Negative predictive value.
- TPR: True positive rate.
- FPR: False positive rate.
- TNR: True negative rate.
- FNR: False negative rate.
- pDLR: Positive diagnostic likelihood ratio.
- nDLR: Negative diagnostic likelihood ratio.
- FSCR: F-score

```
measure <- measureit(score = score, class = class,
                     measure = c("ACC", "SENS", "FSCR"))

plot(measure$ACC~measure$Cutoff, type = "l")
```
