```

Imposição de estrutura com arcos que fazem sentido clínico (*White list*)

```
s1 <- sample_frac(ddf, .9, FALSE)
cat(nrow(ddf) - nrow(s1))

## 7667

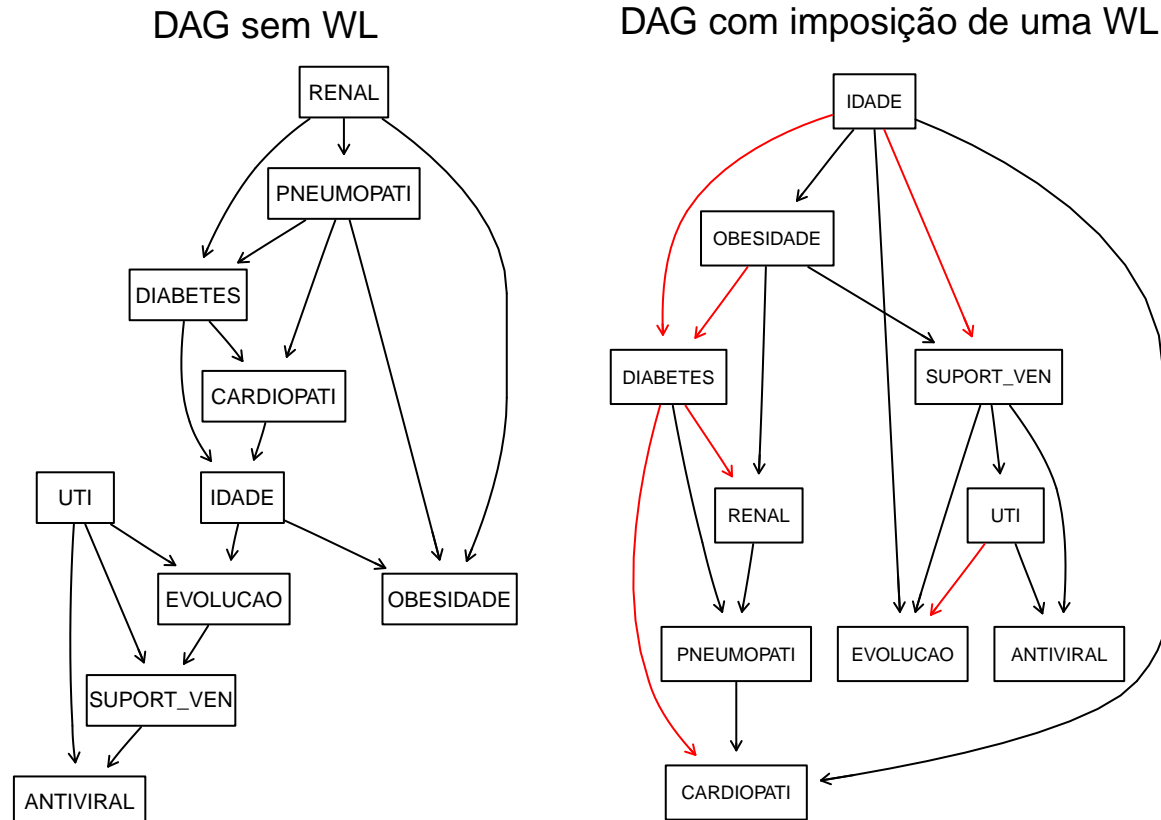

wl = matrix(c("OBESIDADE", "DIABETES",
              "IDADE", "DIABETES",
              "IDADE", "SUPORT_VEN",
              "DIABETES", "RENAL",
              "DIABETES", "CARDIOPATI",
              "UTI", "EVOLUCAO"),
            ncol = 2, byrow = TRUE, dimnames = list(NULL, c("from", "to")))

bn1 <- mmhc(s1, whitelist = wl)

#sem WL
bn2 <- mmhc(s1, whitelist = NULL)
```

DAG (*Directed Acyclic Graph*) usando ou não *whitelisting* no algoritmo de aprendizado da estrutura da rede causal

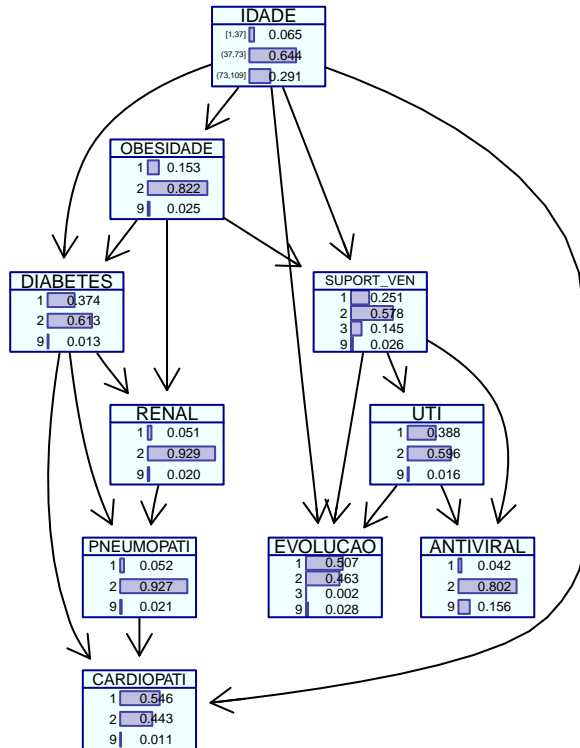

```
par(mfrow = c(1, 2))
graphviz.plot(bn2, shape='rectangle', highlight = NULL, main = 'DAG sem WL')
graphviz.plot(bn1, shape='rectangle', highlight = list(arcs = wl), main = 'DAG com imposição de uma WL')
```

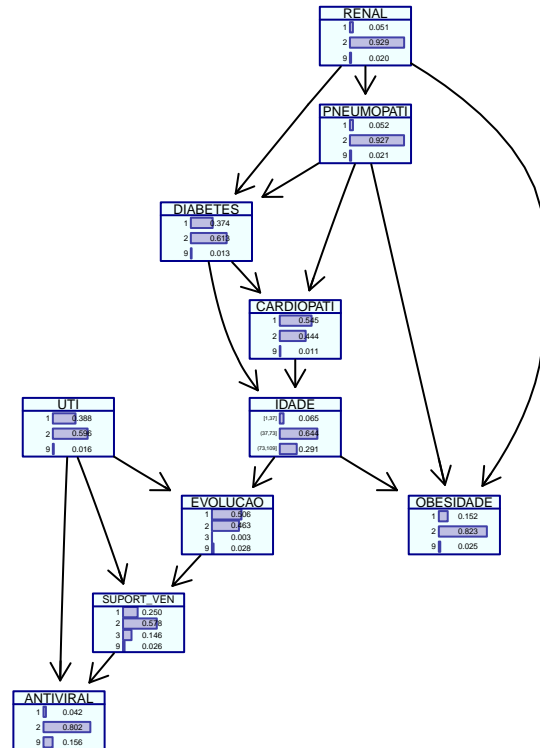

```
fitted.1 <- bn.fit(bn1, s1)
fitted.2 <- bn.fit(bn2, s1)

par(mfrow=c(1,2))
graphviz.chart(fitted.1,type = "barprob", col = "darkblue", bg = "azure", bar.col = "darkblue", main = "DAG sem WL")
graphviz.chart(fitted.2, type = "barprob", col = "darkblue", bg = "azure", bar.col = "darkblue", main = "DAG com imposição de uma WL")
```

DAG sem WL

DAG com WL

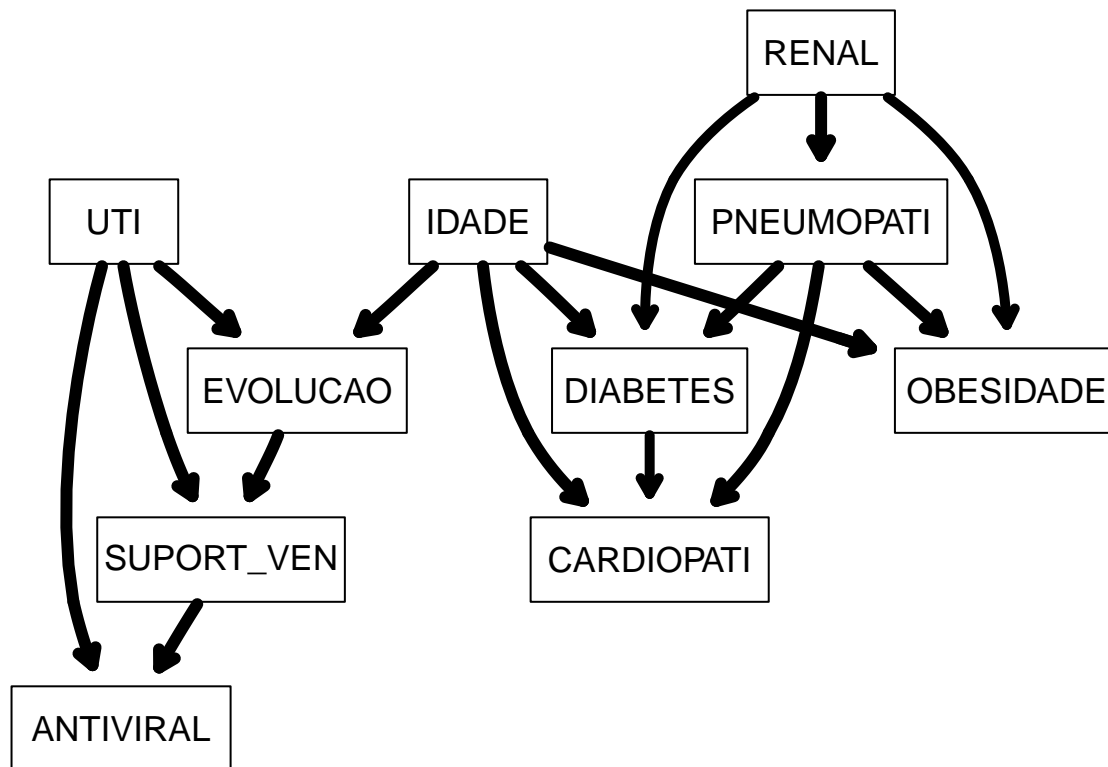

Bootstrapping com WL

```
boots.trap <- 300
str.diff = suppressMessages(boot.strength(s1, R = boots.trap, algorithm = "mmhc"))
cat(paste('Threshold: ', attr(str.diff, "threshold")))

## Threshold: 0.2433333333333333
avg.diff = averaged.network(str.diff)

strength.plot(avg.diff, str.diff, shape = "rectangle", main = paste("Iterações = ", boots.trap))
```

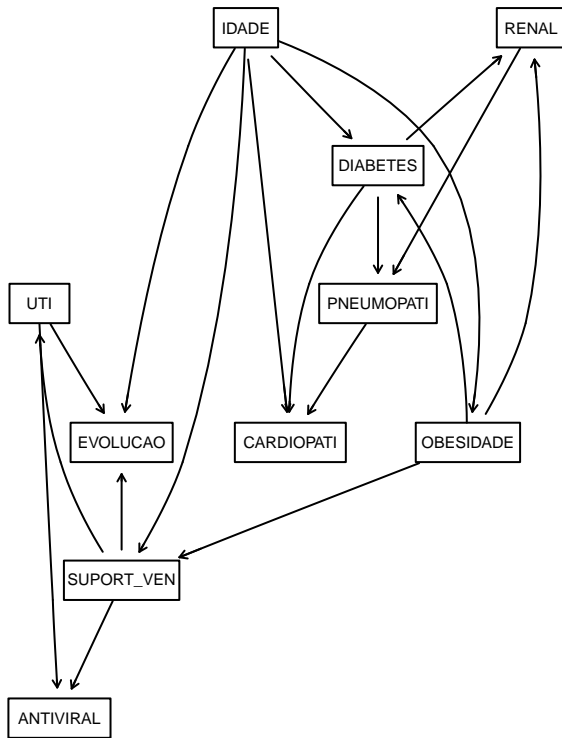

Iterações = 300

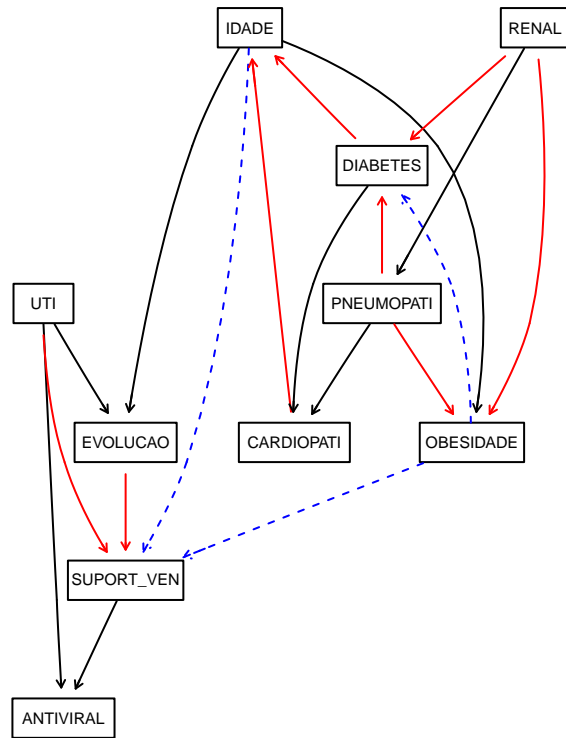

How can we compare the averaged network (avg.diff) with the network we originally learned in from all the data? The most qualitative way is to plot the two networks side by side, with the nodes in the same positions, and highlight the arcs that appear in one network and not in the other, or that appear with different directions.

```
par(mfrow = c(1, 2))
graphviz.compare(bn1, bn2, shape = "rectangle", main = c("DAG único sem WL", "DAG único com WL"))
```

DAG único sem WL

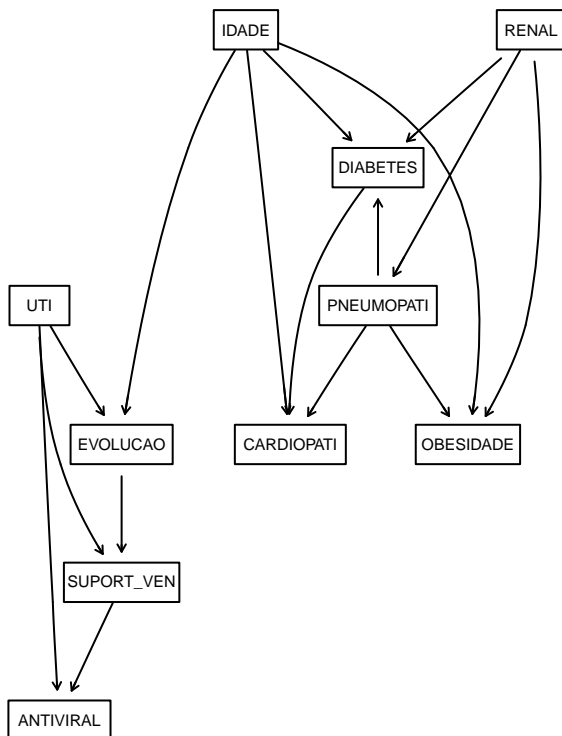

DAG único com WL

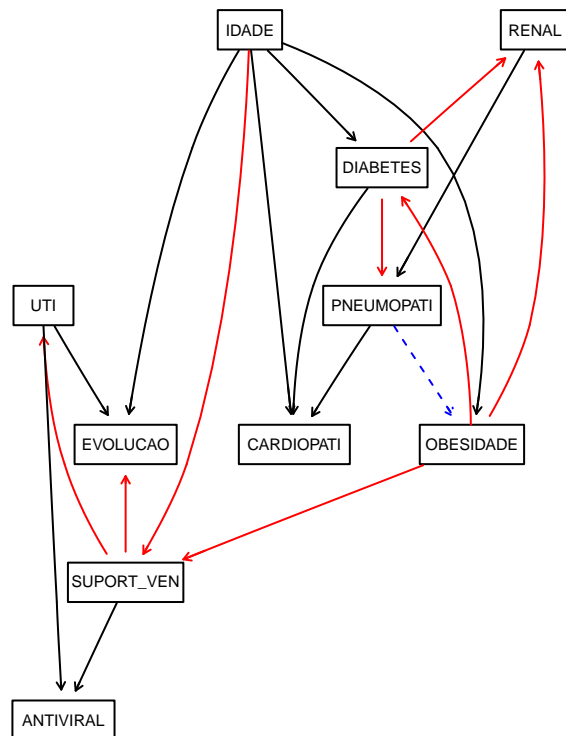

```
par(mfrow = c(1, 2))
graphviz.compare(avg.diff, bn1, shape = "rectangle", main = c("DAG médio sem WL", "DAG médio com WL"))
```

DAG médio sem WL

DAG médio com WL

It is also a good idea to look at the threshold with respect to the distribution of the arc strengths

```
plot(str.diff)
abline(v = 0.75, col = "tomato", lty = 2, lwd = 2)
abline(v = 0.85, col = "steelblue", lty = 2, lwd = 2)
```

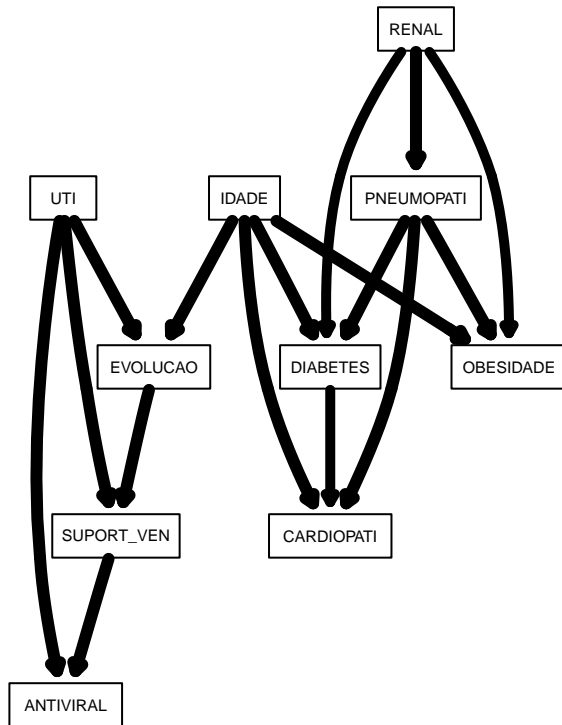

threshold = 0.243

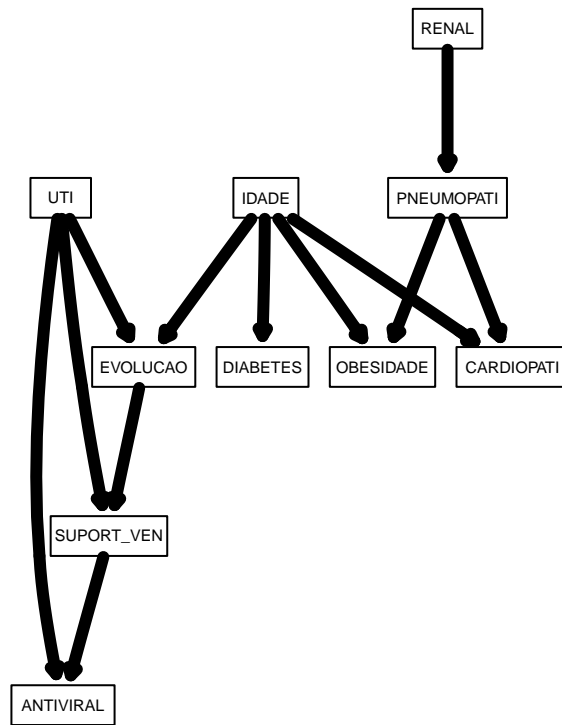

The simpler network we obtain by setting `threshold = 0.8` in `averaged.network()` is shown below; it is certainly easier to reason with from a qualitative point of view. Na figura abaixo R é o número de iterações usadas na fase de *bootstrapping*

```
par(mfrow = c(1, 2))
avg.simpler = averaged.network(str.diff, threshold = 0.95)
strength.plot(avg.diff, str.diff, shape = "rectangle",
              main = paste("R = ", boots.trap, " Thr = ", attr(str.diff, "threshold")))
strength.plot(avg.simpler, str.diff, shape = "rectangle", main = 'R = 100 Thr = 0.95')
```

R = 300 Thr = 0.243333333333333

R = 100 Thr = 0.95

Markov Blanket da variável EVOLUCAO

```
cat (mb(x = avg.diff, node = 'EVOLUCAO'))

## IDADE UTI SUPORT_VEN
##
cat (mb(x = avg.simpler, node = 'EVOLUCAO'))

## IDADE UTI SUPORT_VEN
#save the currente workspace
save(list = ls(all.names = TRUE), file = "kk_06_sem_neuro_90pc_300it.RData", envir = .GlobalEnv)
```
